Modernized “Polonez” multiple rocket launcher missiles system have successfully passed firing tests

Combat launches of the upgraded version of the MRLM “Polonez” were successfully made on the territory of the Gomel region, in the framework of firing tests on Thursday, October 26, 2017.

“The excellent firing results asserted the unique capabilities of this weapon with a new enhanced-range missile,” said the Defense Minister on Sputnik on Thursday.

They also noted that after the upgraded “Polonezi” hit designated targets in a radius of 300 km.

The Defense Minister said that the flight route of the rocket was calculated over deserted and sparsely populated areas of the country and was adjusted throughout its entire length.

In the future, it is planned to bring the Polonez into services to the missile forces and artillery of the Armed Forces of the Republic of Belarus, which will increase their ability to solve a wide range of firing tasks.

MRLM “Polonez” is one of the most famous developments of the Belarusian Defense Industry and its parameters conform to the best world analogues.
